

'Tr' Command #1

In this challenge, we practice using the `tr` command because it is a useful translation tool in Linux.

In a given fragment of text, replace all parentheses () with box brackets [].

Input Format

A block of [ASCII](#) text.

Output Format

Output the text with all parentheses () replaced with box brackets [].

Sample Input

```
int i=(int)5.8
(23 + 5)*2
```

Sample Output

```
int i=[int]5.8
[23 + 5]*2
```
