

Long Permutation

Consider an infinite array, a , of positive numbers, a_1, a_2, \dots , where each $a_i = i$. You can apply a permutation, p , of size n (i.e., n different numbers $1 \leq p_1, \dots, p_n \leq n$) to the n -element subset of your array from a_1 through a_n in the following way:

$$(a_1, \dots, a_n) \rightarrow (a_{p_1}, \dots, a_{p_n}).$$

To get infinite array b , you must apply permutation p to the first n elements (a_1 to a_n), then to elements a_2 through a_{n+1} , then to elements a_3 through a_{n+2} , and so on, infinitely many times.

Given the values of n , m , and p , find and print the value of b_m . See the *Explanation* section below for more detail.

Note: This challenge uses 1-based array indexing.

Input Format

The first line contains 2 space-separated integers, n and m , respectively.
The second line contains n space-separated integers describing the respective values of p_1, p_2, \dots, p_n .

Constraints

- $1 \leq n \leq 10^5$
- $1 \leq m \leq 10^{18}$
- $1 \leq p_1, p_2, \dots, p_n \leq n$, and each p_i is unique.

Output Format

Print a single integer denoting the value of b_m .

Sample Input 0

```
2 10
2 1
```

Sample Output 0

```
11
```

Sample Input 1

```
3 1
2 3 1
```

Sample Output 1

```
2
```

Sample Input 2

```
3 10
```

Sample Output 2

10

Explanation

Sample Case 0 has the following sequence of array transformations:

1 2 3 4 5 6 7 8 9 10 11 12...
2 1 3 4 5 6 7 8 9 10 11 12...
2 3 1 4 5 6 7 8 9 10 11 12...
2 3 4 1 5 6 7 8 9 10 11 12...
2 3 4 5 1 6 7 8 9 10 11 12...
2 3 4 5 6 1 7 8 9 10 11 12...
2 3 4 5 6 7 1 8 9 10 11 12...
2 3 4 5 6 7 8 1 9 10 11 12...
2 3 4 5 6 7 8 9 1 10 11 12...
2 3 4 5 6 7 8 9 10 1 11 12...
2 3 4 5 6 7 8 9 10 11 1 12 ...

As you can see, each $b_i = a_i + 1 = i + 1$. Thus, we know that $b_m = m + 1 = 10 + 1 = 11$.

Sample Case 1 and *Sample Case 2* have the following sequence of array transformations:

1 2 3 4 5 6 7 8 9 10 11 12 13...
2 3 1 4 5 6 7 8 9 10 11 12 13...
2 1 4 3 5 6 7 8 9 10 11 12 13...
2 1 3 5 4 6 7 8 9 10 11 12 13...
2 1 3 4 6 5 7 8 9 10 11 12 13...
2 1 3 4 5 7 6 8 9 10 11 12 13...
2 1 3 4 5 6 8 7 9 10 11 12 13...
2 1 3 4 5 6 7 9 8 10 11 12 13...
2 1 3 4 5 6 7 8 10 9 11 12 13...
2 1 3 4 5 6 7 8 9 11 10 12 13...
2 1 3 4 5 6 7 8 9 10 12 11 13 ...

As you can see, $b_1 = 2$ and $b_{10} = 10$.
