Range of Integers

Write a program to list all the integers between two integers L

and R (including L and R). L and R can be any integer between 1 and 100. 1≤L,R≤100

Instructions:

- We have **defined** the integer variables L and R for you.
- We have provided the code to get **inputs** for the variables.
- **Print** all the integers between L and R (including L and R) with space between them

Sample Input:
L = 5, R = 10

Sample Output:
5 6 7 8 9 10
