# Positive Lookahead

regex_1(?=regex_2)

The positive lookahead (**?=**) asserts `regex_1` to be immediately followed by `regex_2`. The lookahead is excluded from the match. It does not return matches of `regex_2`. The lookahead only asserts whether a match is possible or not.

Regex Pattern

c(?=o)

Test String

chocolate

In the above image, the Regex Pattern is matched with the Test String.

Task

You have a test string S.
Write a regex that can match all occurrences of **o** followed immediately by **oo** in S.

Note

This is a regex only challenge. You are not required to write code.
You have to fill the regex pattern in the blank (_____).
