Sum of two

Maths and logic are the necessary parts of programming that can be learned through practice. Here is a simple mathematical problem of addition for you to solve.

Write a program to print the sum of two integers.

Instructions:

- We have defined two integer variables num1and num2 for you.
- We have provided the code to get the **input** for the two variables.
- You have to write the **logic** to add the two variables.
- **Print** the sum.
